PROJECTS

SocioApp – *Flutter Mobile Application*   *link*

- Developed a networking app in **Flutter** that includes **user registration**, **login, post creation, liking and commenting, and profile updates.**
- Used **Laravel** to create a **backend API** to handle the application's functionality.
- Followed best practices and wrote clean, **reusable code for the Flutter frontend.**
- **Integrated the Flutter application with the Laravel API** to ensure a seamless user experience.
- **Tested** the application on multiple devices to ensure that it is responsive and functional.

Library Management System –Php Web Application   *link*

- Implementing the functionality of the application using a PHP, as well as a **MySQL** database system .
- Creating user **roles and permissions** for both students and administrators.
- Administrators can manage user requests for books, add new books to the system, and edit members' roles. Students can request books from the system.
- Developed authentication and authorization system to ensure that only authorized users can access certain parts of the application.
- Implementing a search functionality that allows users to search for books by title, author
- Testing the application thoroughly on multiple devices to ensure that it is responsive, functional, and meets the requirements of the users.

Admin Dashboard –Tailwind Admin Dashboard   *link*

- An awesome responsive admin dashboard. Technologies used include **Tailwind Css** and **Alpine Js.**

Jsbits – *Responsive Web Applications*   *link*

- Numerous web apps in Javascript from Simple to Complex

Color-CSS – *A chrome extension for css developers*   *install*

- An awesome color picker that helps **CSS** and **front end developers** in their development processes.
- **Check** the **hex code** of any website and also can generate different colors for various use in your development process.
